- Angel Wing Begonia
- Anthurium
- Aralia Plant
- African Violet

Amarillys

Amaryllis plants are native to the tropical regions of South America. These spectacular bulb plants can be planted from October through the end of April and will bloom from late December to June. With proper after-bloom care, an Amaryllis plant flowers year after year. Amaryllis Bulbs can be purchased pre-planted or you can do the planting yourself. The larger and fatter the plant bulbs, the more flowers an Amaryllis produces. The brightly colored flowers come in red, orange, white, pink, and salmon. Some new varieties even have striped flowers.

Water

Amaryllis plants need bright indirect light. Southern exposure is best, eastern and western exposures are adequate, northern exposure requires additional artificial light.
